Overview

Many foodservice directors want more for their foodservice program. More variety. More seasonal menus. More participation. And, largely, they want more time for planning menus, analyzing nutritional content, training staff, running reports and working with distributors to get the necessary food. NutriStudents K-12® can help by providing real food and real help, to achieve real results. Some schools report saving as much as 40 hours a week with NutriStudents K-12!

The System

- NutriStudents K-12 is a self-operated foodservice platform that streamlines management of nearly every facet of a district's foodservice program, from USDA-compliant menus and preparation to ordering, training and menu promotion. We're not a foodservice management company. We're a tool for districts to use to make their program better than ever, and save time, money, food and headaches while pleasing students.
- Menus are the heart of the NutriStudents K-12 platform. We provide 45 USDA-compliant weeks of NSLP and CACFP menus – all of which have been certified by our registered dietitian as meeting USDA nutritional standards. And every flavorful lunch entrée has been taste tested and enthusiastically approved by kids.
- All the needed production reports, nutritional analysis, and complete, scalable, step-by-step recipes are easily accessible anytime via the online portal, saving countless hours and paperwork.
- NutriStudents K-12 helps schools purchase wisely and incorporate commodity products into their menus to the fullest extent. With our USDA Commodity Calculator, DataBites™ inventory and order management system, and simplified market baskets, districts are sure to save money and reduce waste.
- Our training resources help foodservice directors and their staffs understand and follow the federal guidelines governing school nutrition programs. Resources include tutorial videos, cafeteria posters and Cafeteria Connection, a parent newsletter to help build participation.

Results

The platform enables districts to more easily comply with the federal guidelines, to operate more profitably and to function more efficiently, potentially freeing up human resources that can be better used elsewhere. Regardless of districts' measure of success – less waste, time saved, commodities savings, increased participation and revenues, fewer complaints – NutriStudents K-12 delivers a positive return on investment within months.
